

# COMPANY PROFILE

## THE COMPANY

Tecla Group s.r.l. was born in recent months from the partnership of three companies with great experience and tradition in sanitary ceramics and bathroom furniture. Production takes place in a 20,000 m<sup>2</sup> factory.

The green perspective is in the foreground: the factory is equipped with a photovoltaic system and all consumables are recycled.

The company boasts a high level of safety at work, thanks to the innovative tools available to employees, such as the total elimination of workloads, through the use of efficient robotics.

## THE PRODUCT

We work joining the artisanal way with the more modern machineries and advanced technologies and produce washbasins in fine Fire-clay through completely renewed production system adopting the mechanization of various procedures (casting, glazing, firing, etc.) which guarantees quality control of every step of production, as our Iso 9001 certification states.

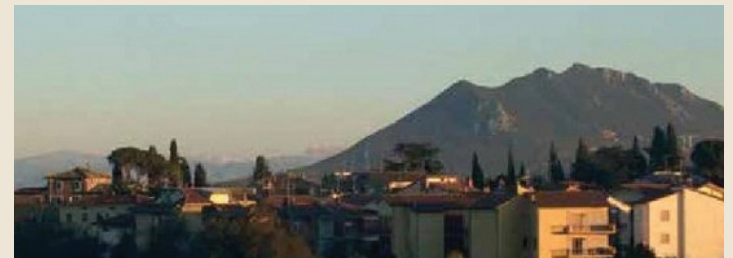

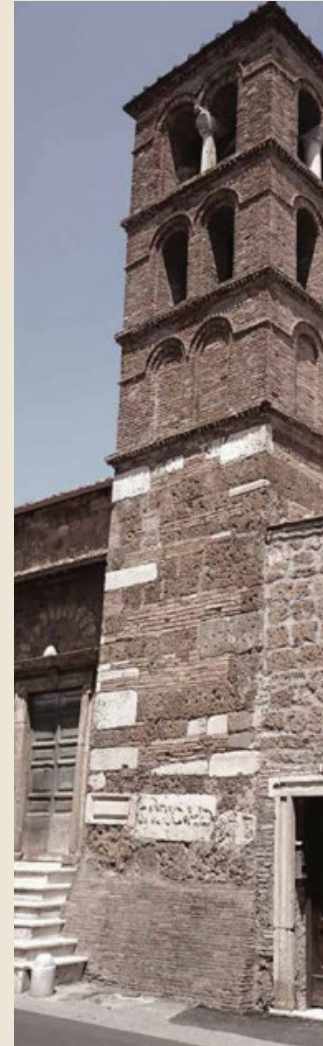

We offer a wide range of washbasins inspired to essential shapes, and we are always investing in research and development for updated solutions which are refined and elegant.

At the moment the core business is design washbasins with a length until 160 cm, one, the spearhead of our offer. In the next future we will be starting to produce our own ranges for wc and bidet to complete our offer for the bathroom as a privileged environment.

## THE REGION

The factory is located in Civita Castellana, the very heart of the Italian ceramic district, where the production of ceramics has very ancient origins, dating back to pre-Roman times, from a population called Falisci. Civita Castellana has currently been, for decades, the main industrial reality of Tuscia, inserting itself as an "industrial island" in a purely agricultural provincial context. The ceramic production of Civita Castellana continues to be a Made in Italy excellence, boasting quality and design, appreciated throughout all the world.
